Objective

To leverage strong software engineering, distributed systems, and problem-solving skills to build scalable, high-performance applications while continuously learning and delivering impactful results.

Education

B.Tech in Computer Science (Data Science), VNRVJIET, Hyderabad
CGPA: 8.20 / 10

2023 – 2027

Technical Skills

Languages:	Java, C++, Python, SQL
Frameworks:	Node.js, Express.js, FastAPI
Web:	HTML, CSS, JavaScript, React, REST APIs
Databases:	MongoDB, Supabase, Firebase
Cloud & Tools:	AWS Lambda, Git, OAuth 2.0, JWT, WebRTC, PeerJS
Concepts:	Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Distributed Systems

Projects

- **Study Buddy — Collaborative Learning Platform (React, TypeScript, Supabase, PeerJS, WebRTC)**
Developed a scalable real-time collaborative platform supporting concurrent users with low-latency communication using WebRTC and PeerJS. Designed and integrated RESTful APIs and secure authentication using JWT and Google OAuth 2.0 for multi-user access. Implemented distributed features including synchronized sessions, shared state management, and real-time collaboration tools across 12+ integrated modules. Built and optimized frontend performance for interactive features such as in-browser Python IDE and collaborative whiteboard.
- **FileMind — Document Intelligence System (React, FastAPI, Supabase)**
Built a scalable document processing system using FastAPI, enabling efficient semantic search and retrieval over large datasets. Implemented optimized query pipelines using vector embeddings and indexing techniques to improve retrieval performance. Designed modular backend services with secure authentication (JWT, OAuth) and multi-tenant cloud storage. Developed clustering algorithms and structured pipelines to organize and process unstructured data efficiently.
- **Content-Flow — Workflow & Task Management Platform (React.js, TypeScript, Node.js, AWS Lambda)**
Developed backend services for task scheduling, assignment, and tracking using Node.js, ensuring reliability and scalability. Designed and deployed serverless components using AWS Lambda for event-driven workflows and high availability. Built RESTful APIs and integrated secure authentication mechanisms for seamless user management. Implemented responsive UI and analytics dashboards to track productivity and system usage.
- **Second Brain — Knowledge Management Application**
Developed a centralized system to collect, store, and retrieve content from multiple sources using structured workflows. Designed efficient data organization and retrieval mechanisms to handle diverse unstructured inputs. Implemented scalable storage and indexing strategies to improve access and usability of stored information.

Achievements & Hackathons

- **HackIndia 2025** — Collaborated in a fast-paced team to design scalable AI-based solutions under time constraints.
- **AI Hack Day 2025** — Developed NLP pipelines, improving processing efficiency and model output consistency.
- **Google Solution Challenge 2025** — Worked on evaluation metrics and analysis of model outputs.

Certifications

Smart Interviews — Data Structures and Algorithms | Coursera — Generative AI with LLMs | NPTEL — Introduction to Internet of Things | Udemy — Full Stack Web Development

Relevant Coursework

Data Structures, Algorithms, Operating Systems, DBMS, Computer Networks, Machine Learning
